(Carlson Park Trail Development Project – Northwest Zone Spraying)

On the morning of Thursday, June 4, a 3-acre area of Carlson Park will be sprayed with glyphosate for weeds and invasive plants. This area is in the Northwest Zone of the Carlson Park Trail Development project. In the following weeks, the seedbed will be conditioned and seeded. Prairie mixes will be used in this zone to establish an oak-savanna ecosystem.

The area will be closed until the re-entry period of 24 hours, and signage will remain up for 96 hours with additional information regarding the application.
